

## KOMPAKTA

### Stationary car depollution module

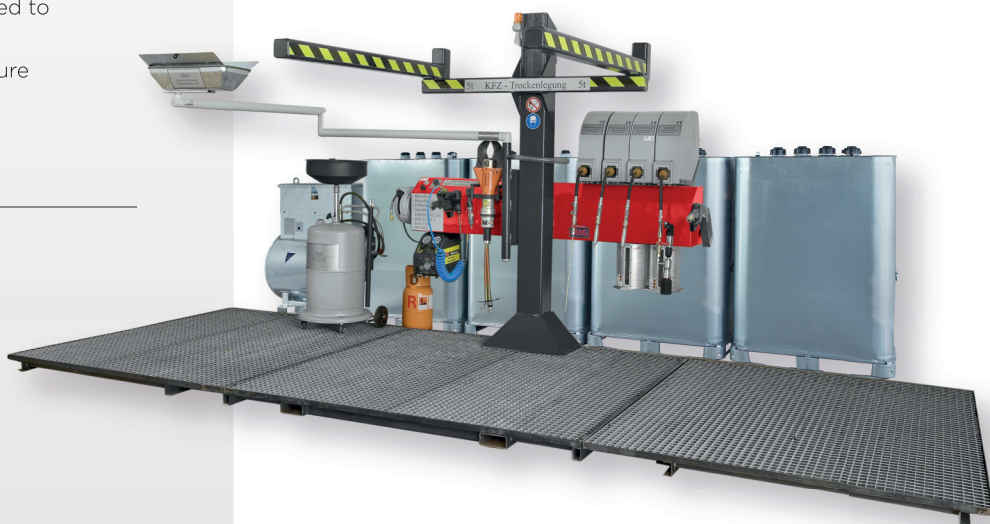

A stationary and efficient system designed to extract all liquids form a car. The support frame and the base tub ensure safe and clean work.

#### > Configuration:

- support frame with a load of 3 tons
- three-piece Base tub
- petrol-/ diesel- tank drilling device to absorb liquid and gaseous substances
- dismantling tool set
- waste oil collection funnel
- brake fluid container 75 liter
- filter for cleaning of petrol and diesel

#### > Technical data:

- L x W x H: 500cm x 250cm x 220 cm
- Weight: 2000 kg
- Processing time: 15 min/ Car
- Air requirement: 8 bar, 350l/ min
- Loading: 3 tons

### The Innovation of car depullution

#### DETAILS:

Fuel cylinder for cleaning of petrol and diesel

Probe set

Three-way control of the liquid

Tanks
